FAST®
Foundation for Advancing Security Talent

What Can FAST Do For You?

Companies across the entire security industry are looking for candidates to fill a multitude of exciting roles. However, they face challenges finding and hiring talent. Potential applicants often lack awareness of what the field of security is and access to training resources. That is where FAST comes in.

FAST is dedicated to connecting passionate, innovative professionals with new opportunities in the electronic security and life safety industry. Through outreach and education, FAST brings awareness to the career advancement opportunities within the fast-paced technology industry that serves to keep people, places and property safe.

"Connecting Talent with Opportunity"

The Security Industry:
The physical security space encompasses a wide range of devices and technologies that are deployed primarily to manage risk and protect people and property from criminal and other threats in schools, hospitals, businesses, homes, government buildings, military installations and other sites.

The most widely-known security devices are video surveillance cameras, access control equipment and intrusion detection alarms. In recent years, though, the industry has expanded significantly to include emerging technologies such as drones and robotics, biometrics, algorithm-based analytics and artificial intelligence (AI).
